

I am

student

I'm trying to

design a farm scale system  
aimed at improving the use  
of manure on the farm and at  
reducing the quantity of  
waste at the same time.

But

it requires an unlimited  
or continuous internet  
connection to be  
successful.

Because

it can detect the  
soil moisture  
and temperture

Which makes me feel

happy
