

Objectives:

sustainably increasing agricultural productivity and incomes;

Adapting and building resilience to climate change;

Reducing and/or removing greenhouse gas emissions, where possible.

The reasons for why the production and marketing of the superfoods is an alternative beneficial option for the bio-producers.

IoT in agriculture uses remote sensors, and application imaging combined with continuously progressing machine learning and analytical tools for monitoring crops, surveying, and mapping the fields, and providing data to farmers for rational farm management plans to save both time and money.
